AIMA'S QUESTIONNAIRE FOR DUE DILIGENCE OF

MANAGED FUTURES FUND MANAGERS/COMMODITY TRADING ADVISORS (CTAs)

Published by The Alternative Investment Management Association (AIMA)

AIMA's Illustrative Questionnaire for Due Diligence Review of MANAGED FUTURES FUND MANAGERS/COMMODITY TRADING ADVISORS (CTAS)

The purpose of this document is to serve as a guide to investors in their review and assessment of managed futures fund managers/CTAs. This due diligence questionnaire is an unavoidable process that investors must follow in order to choose a manager. It is most important to understand clearly what you plan to invest in. You will also have to:

- identify the markets covered,
- understand what takes place in the portfolio,
- understand the instruments used and how they are used,
- understand how the strategy is operated,
- identify the sources of return,
- understand how ideas are generated,
- check the risk control mechanism.
- know the people you invest with professionally and, sometimes, personally.

Not all of the following questions are applicable to all managers but we recommend that you ask as many questions as possible before making a decision.

IMPORTANT

The copyright in this questionnaire belongs to AIMA. You may copy the questionnaire for your own company's use and may distribute it (unamended or amended) for the purposes of a due diligence review, but you may not distribute or copy it for any other purpose or to any other person, including any representative of the media, without the prior written consent of AIMA which will only be given in exceptional circumstances. If you wish to share the questionnaire with others, please provide their details to AIMA.

DISCLAIMER

Whilst AIMA has used all reasonable efforts to produce a questionnaire of general application in connection with a due diligence appraisal of managed futures fund managers/CTAs, in any particular case an investor is likely to have his own individual requirements and each managed futures fund manager/CTA his own characteristics. As a result, prior to any individual investor sending out the questionnaire, it is strongly recommended that the questions are reviewed and, where necessary, amended to suit his own requirements and his state of knowledge of the managed futures fund manager's/CTA's operations.

In addition, responses to the questionnaire should not be relied upon without review and, where considered appropriate, further investigation. In order to obtain the best possible information on any specific managed futures fund manager additional questions should be raised to clarify any point of uncertainty, and where practicable verbal examination should be undertaken. In particular, AIMA recommends that in respect of special areas of concern, such as fund performance or risk profile, independent third party data should, if possible, be obtained in order to verify these facts.

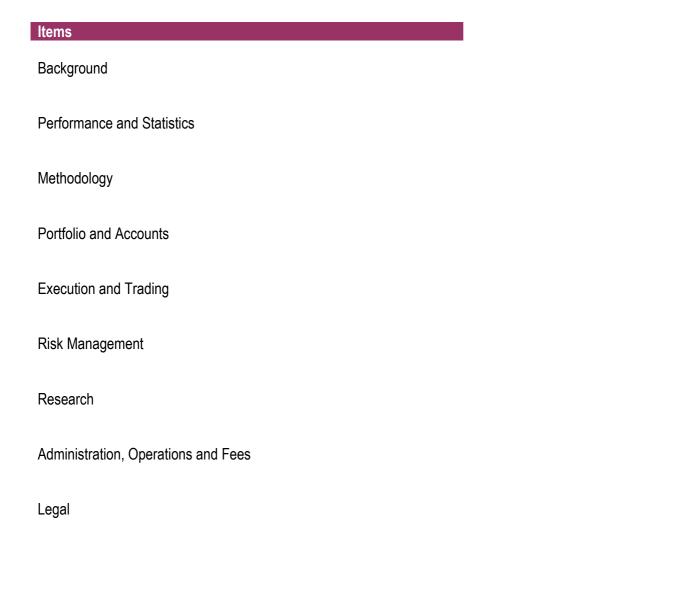

Accordingly, none of AIMA, its officers, employees or agents make any representation or warranty, express or implied, as to the adequacy, completeness or correctness of the questionnaire. No liability whatsoever is accepted by AIMA, its officers, employees or agents for any loss howsoever arising from any use of this questionnaire or its contents or otherwise arising in connection therewith.

This questionnaire has been developed for Managed Futures Fund Managers/CTAs only and incorporates the input of leading U.S. CTAs and Commodity Pool Operators (CPOs). It is not intended for managers implementing securities-based strategies. A separate questionnaire relating to hedge fund managers is available from AIMA.

Does the firm own the trading methodology currently	Yes.
being used? If not, who does?	
Are there any patents, trademarks, etc. held by the firm	Yes, patents are held by Michael Mundt in the area of hard disk drives.
or any of its principals?	
Describe the three worst trading experiences the firm has had, and explain how they influenced the evolution of the firm's trading methodology.	The single worst experience was at the start of our trading with the Alpha Fund, when we were validating our basic operations. There was nothing wrong with our system per se, but the combination of limited domestic markets and now-outdated models combined to give us a 14.78% loss in our first four months of operation. However, it encouraged us to a) finalize our new long-term model suite, b) diversify into foreign markets, and c) devote considerable effort into developing short-term algorithms that can profit in market conditions not well suited to long-term, trend-exploiting models. The next worst experience happened in January 2010 with the Mosaic (3x) program. After 39 months of real-time trading, we experienced a -30% month (in a program that currently targets a 40% annualized volatility). This is not impossible but is an unlikely outlier event. This prompted us to diligently revisit the model implementation and the risk management. In the end, we found nothing wrong with our system deployment, but it is a proper reminder that the low-probability events do eventually occur, and it it thus important to make the short-term risk extremely clear to potential and current investors.
If the firm's trading methodology is computerised and systematic: • Is the trading system ever overridden? If yes, under what circumstances?	Only in case of unforeseen circumstances (it has never been overridden to date).
 Does the trading system ever add to or reduce profitable or losing positions? If yes, under what circumstances? Are there maximum additions? If so, how is the maximum determined? 	Trading strengths change on a daily basis as a result of the normal algorithmic influence.
Are multiple trading systems used? If yes, please explain:	Yes. Short-term (event-driven, pattern-based) as well as long-term (trend-exploiting)
 Does the firm apply the same system to all markets or are there different systems for each? 	Same for all markets.
What technical or fundamental information	
is considered important for a trade entry	
signal?	Price/volume/open interest/volatility/other.
 Are entry and exit signals generated by the same trading system? If not, please explain how they are generated differently. 	Yes.
Does the trading methodology differ frm market to market? If yes, please describe what the difference is based on?	No.
 Is the trading system always with long or short, or is there also a neutral zone? 	Trading strength can vary continuously and can be 0 (i.e. neutral).
Please explain: • How frequently are changes made to the trading system? Please explain the	
 development and implementation process: Is the firm's research focused on developing new trading systems or on further refining the existing systems? 	Additions are made only after rigorous development and test periods. Additions are implemented only if the overall system performance and risk profile improve as a result.
	Mainly new development, but some refinement of current systems is done as well.
Is the "cost of carry" a factor in the current	
methodology?	No.
Which of the following activities are influenced by	

subjective judgement? Please answer by Yes or No,	
and indicate a % where applicable:	
Portfolio structure: To de control	No.

RISK MANAGEMENT	
Describe the firm's overall risk management principles	For Alpha and Mosaic Institutional, we target an annualized volatility of approximately 12% based on
and approach:	daily returns.
How does the firm calculate risk?	We perform out-of-sample simulations and observe the frequency and magnitude of adverse returns.
Is the risk calculated for each trade? If yes, please	Many more details about our risk management are available in a stand-alone presentation. Every market has the same maximum risk allocation, which is determined as a function of the overall
explain:	risk-targeting process.
Do all the programmes use the same risk management	Yes.
methodology? If not, please explain:	
	Our approach is similar but not identical to the VAR methodology. Risk is assessed using a combination
	of long-term and short-term volatility on a per-market basis. Position sizes are adjusted accordingly on a
	daily basis. Fat-tailed return distributions and serial correlation of daily returns are implicitly included in
	risk budgeting and analysis.
What determines the amount of leverage used?	Return targets coupled with historical drawdown statistics on a portfolio basis. On a per-market basis,
	position sizes also incorporate short-term and long-term volatility estimates.
	200/ (for Maggia Institutional) 250/ (for Alpha)
methodology? If not, please explain: Is "value at risk" used in the firm's programme? If so, how do you assess the value at risk of your different market positions and what confidence level do you use? What determines the amount of leverage used? How much leverage (% of margin to equity) is used in each programme? Highest: Lowest: Average:	of long-term and short-term volatility on a per-market basis. Position sizes are adjusted according daily basis. Fat-tailed return distributions and serial correlation of daily returns are implicitly including risk budgeting and analysis.

a "soft" hurdle?	N/A.
Does the firm charge all customers the same fees? If	No.
not, on what basis are fees waived or modified?	Von
Does the firm share its fees with any third parties?	Yes.
Are there any present plans to relocate the firm's offices	No.
Does the firm have a lockup period or any special requirements for withdrawal?	I NU.
Does the firm or any of its officers or employees	No.
receive, directly or indirectly, any rebate on brokerage	
commissions? If yes, please explain on what basis, and	

from which brokerage firms:	
Has the firm ever been required to restate NAVs, fees or other calculations? If yes, please explain:	Small changes to the NAV (increases) were made when we moved from cash-based accounting to accrual-based accounting. The effect was to improve the average monthly return by < 0.1%.
LEGAL	
Does the firm hire traders from other investment management firms?	N/A.
Has the firm had any disputes over non-compete, non-disclosure or similar covenants?	No.
Are any of the firm's employees subject to non- competes, "golden handcuffs", etc.?	No, but all intellectual property remains exclusively with Revolution Capital Management LLC.
Does the firm have any existing marketing or consulting agreements?	Yes.
Has the firm appeared in any recent advertisement or newspaper or magazine articles?	No.
Have there ever been any criminal, civil or administrative proceedings against the firm or any of its principals, or any similar such matters including reparations, arbitrations and negotiated settlements?	The CME has determined that a position held by Mosaic/Mosaic Institutional in May 2012 violated NYMEX Rule 562. More specifically, DUNN Capital (as service provider for Mosaic) rolled from the June 2012 Natural Gas contract to the July 2012 contract one day late due to a misinterpretation of the exchange rules regarding holidays. Eventually, the CME determined that both DUNN and Revolution are responsible for this misinterpretation. The enforcement action was finalized in July 2014 and required Revolution to pay a fine of \$15,000 plus \$4,020 in profits as a result of the trade. DUNN's enforcement action is being handled as a separate matter.
Does the firm maintain a written Compliance Manual? If yes, please provide a copy.	Yes.
Does the firm or any affiliate ever take "custody" of client assets?	No.
Does the firm or any affiliate ever deduct its fees directly from any client accounts?	No.
What is the firm's liability/indemnity standard?	N/A.
Does the firm make use of "soft dollars"?	No.
